

Test project: **search page using api**

Goal : produce a working search page using internetvideoarchive.com's api documentation can be found at

[IVA Developer Portal \(iva-api.com\)](https://iva-api.com)

The search page should contain a search box that when a movie or television show title is entered and the submit button clicked should return search results from our title search api displaying enough data to differentiate to the user which title is the one user is interested in on selection of a search result display more detailed data or your choosing

Deliverable: URL to the working page and URL to GitHub code repository of source code

If you have technical questions please contact me [at bobk@internetvideoarchive.com](mailto:bobk@internetvideoarchive.com)

Technology to use: [Blazor | Build client web apps with C# | .NET \(microsoft.com\)](#)

I may have them request an apikey with free trial version but I don't want to flood Rhodes inbox

If you don't already have a free azure subscription to host the project

You can create a free one here:

[Create Your Azure Free Account Today | Microsoft Azure](#)

And host it in an app service

Commented [BK1]: @Trevor McDade

Commented [BK2R1]: @Trevor McDade I could use your input on best way to have them request free trial so they don't get in the way of our sales
